

Focus ON LOW VISION

With Minden Medical Center Home Health Agency

Minden Medical Center Home Health Agency offers a Low Vision Program designed to help patients with low vision manage themselves at home. The program cannot cure or even change the underlying causes of low vision, but is designed to improve safety and quality of life.

Function

Teaching and training with adaptive equipment is provided to improve mobility and the patient's independence in functioning everyday tasks.

Occupational Therapy

Our licensed Occupational Therapist assesses the patient and their home environment and recommends techniques or assistive equipment to help improve or maintain their level of independence.

Coping

The program works to improve coping skills, aiding the patient in dealing with their vision loss, in the comfort of their own home.

Unique

Treatment plans are tailored to accommodate patient-specific needs and goals. Techniques may include concepts of glare management, contrast use, and proper lighting as part of the overall treatment program.

Safety

The most important goal of the program is to maximize the safe, functional potential of those we serve.

Our program may be covered by Medicare, Medicaid or Private Insurance. A referral from a physician is necessary to participate in the Low Vision Program and patients must have a visual acuity no better than 20/70 in their best eye or a visual field of 20 degrees or less.
